

MICHAEL GRAY, PMP

Senior Technical Product Manager | Intelligent Automation | Applied AI

Columbus, OH | +1 773-793-6566 | michael.gray@grayminds.com | [linkedin.com/in/graym](https://www.linkedin.com/in/graym)

Professional Summary

Strategic Technical Product Manager who drives intelligent automation products (AI/ML, IDP) from concept through production – connecting technical feasibility, business value, and the human judgment layer that makes AI deliver reliable business outcomes. Known for transforming ambiguous, chaotic problem spaces into structured delivery with measurable results.

- **End-to-End Operational Awareness:** Brings direct experience operating where automation output meets real business processes across healthcare, insurance, and finance – informing core strategic business decisions that scale for edge cases, cognitive load, and operational risk from day one.
- **Human-Machine Systems Expertise:** Defines where automation thrives and where human review is required – combining ML confidence tuning, training data strategy, and formal human factors education at Georgia Tech to optimize both accuracy and user trust as a trusted advisor to all stakeholders.
- **Hands-On Technical Fluency:** Foundational experience in GenAI, LLMs, SQL, .NET, Azure, and platforms like Tungsten TotalAgility and UiPath – enabling sharper architecture tradeoffs and build-vs-buy decisions grounded in engineering reality versus marketing hype for real value-proposition analysis.

Key Accomplishments

- **Delivered \$750K in cost savings** for a \$121B enterprise by engineering an AI/ML/LLM document management solution, remediating where automated extraction failed, redesigning human review activities to catch errors before downstream impact, and establishing accuracy thresholds for 16 business units.
- **Reduced deployment timelines by 40%** by identifying which document processing components were reusable as frameworks versus client-specific; standardized the patterns that repeated across implementations while preserving flexibility for edge cases.
- **Cut RPA costs by 60%** by diagnosing that one-off implementations were root cause; established design principles for reusable automation and implemented KPIs connecting performance to business outcomes.
- **Cultivated and mentored a global 40+ person** cross-functional engineering organization of developers, business analysts, project managers, and data engineers with Disciplined Agile practices and earning Canon's *Commitment to Excellence* award for driving client adoption and innovation impact.
- **Built 0-to-1 data product at startup** from concept through launch, owning roadmap, customer research, and technical delivery; increased research efficiency 250% over manual processes.

Core Competencies

- **Product Management:** Product Strategy & Roadmap, Stakeholder Alignment, Requirements Engineering, Agile Delivery, Component Architecture & Reusability, Scalable Design Patterns, Go-to-Market Planning
- **AI & Intelligent Automation:** Intelligent Document Processing, Human-in-the-Loop Design, Training Data Strategy, Model Performance Optimization, Workflow Automation, API Integration & Orchestration

Work Experience

Senior Technical Product Manager / Solutions Architect

Gray Minds LLC | Columbus, OH (Remote) | Aug 2024 - Present

- Owned product roadmap and backlog for an intelligent document processing (IDP) platform built on Tungsten TotalAgility serving large healthcare insurance clients; ran discovery workshops to define requirements, then led feature solution design and delivery to drive adoption and reduced manual effort.
- Designed a configurable case management framework that cut new client implementation times by 40%; identified a gap in native troubleshooting tooling and delivered a diagnostic support utility using C#/.NET and Azure that improved issue resolution capability by 80% reducing volume and accelerating remediation.
- Built an AI-powered automation practice leveraging Anthropic Claude Code, custom agent skill libraries, and evaluation-driven development that validated accuracy before deployment; delivered 15+ projects including a 2,500-document legacy archive conversion and an end-to-end content publishing pipeline.

Senior Manager Digital Transformation & Intelligent Automation

Canon Business Process Services | Remote | Nov 2017 - Jul 2024

- Owned product roadmap for Intelligent Automation SaaS portfolio (Tungsten TotalAgility, Kofax Capture, UiPath); made prioritization calls across competing client needs by assessing implementation effort against business value and reuse potential.
- Navigated conflicting priorities between internal engineering, client operations, and sales by establishing scope boundaries and transparent trade-off discussions; kept delivery on track without sacrificing quality.
- Led product expansion by identifying which automation capabilities had market demand, building prototypes, and presenting to prospective clients; partnered with sales to align demos to specific client pain points rather than generic feature lists.
- Determined which document fields AI could extract reliably and which required human verification by analyzing edge case failures and downstream error costs. Set confidence thresholds per field type, routing high-risk extractions to human review while allowing low-risk fields through automated processing.
- Built BI data architecture and Power BI dashboards from scratch when no reporting existed; chose KPIs that connected AI performance to business outcomes (ROI, deployment velocity, error rates) so executives could make portfolio decisions with real data.
- Filled product owner, solutions architect, and scrum master roles as project needs demanded; led full SDLC delivery in Agile and Waterfall with structured change management across a concurrent client engagements.

Solutions Architect / Product & Delivery Manager

Gray Minds LLC | Columbus, OH | Sep 2012 - Oct 2017

- Delivered enterprise automation initiatives using Kofax Capture and TotalAgility for Fortune 100 clients across healthcare, financial services, retail, and construction.
- Became SME for multi-million-dollar IBM FileNet P8/Case Manager document imaging and enterprise content management program at JP Morgan Chase; facilitated adoption across 8 lines of business through requirements workshops, sprint planning, cross-training, and hands-on support.

Prior Experience

Director of Technology

PharmaShield LLC | Chicago, IL

Built 0-to-1 pharmaceutical patent risk-analysis product from concept to launch using C#/.NET and SQL Server. Owned product delivery, IT infrastructure, and vendor ecosystem for early-stage insurance startup.

Senior IT Product Manager PeopleSoft Financials

Diamond Management & Technology Consultants | Chicago, IL

Owned global product roadmap for Oracle PeopleSoft ERP/SCM across 8 countries and 10+ modules. Developed custom audit module that recovered \$2.5M+ in expense compliance and automated ACH workflows that improved pay-cycle efficiency 80%.

Graduate Research Assistant, Center for Human-Machine Systems Research

Georgia Institute of Technology | Atlanta, GA

Build intelligent tutoring system for pilot training by conducting user research to define model requirements for adaptive instruction. Applied cognitive engineering principles to translate expert knowledge into rule-based decision systems, establishing early credentials in AI model design and human-machine interaction.

Education

Master of Science (M.S.), Human-Machine Systems Engineering | Georgia Institute of Technology | Thesis

Bachelor of Science (B.S.), Industrial & Systems Engineering | The Ohio State University | Magna Cum Laude

Certifications

Project Management Professional (PMP) | Project Management Institute | Active through 2028

Disciplined Agile Senior Scrum Master (DASSM) | Project Management Institute | Active through 2027

Skills

AI & IDP Specializations: Intelligent Document Processing (IDP), Robotic Process Automation (RPA), Business Process Management (BPM), OCR/ICR, Machine Learning Classification and Extraction, ERP/SCM Integration

Technical Stack: Anthropic Claude (Opus)/Claude Code, OpenAI ChatGPT, Microsoft C#/.NET, SQL Server/T-SQL, Azure AI Services, REST APIs, Power BI, Data Modeling, SaaS/Cloud Architecture, GenAI/LLM

Automation Platforms: Tungsten TotalAgility (TTA/KTA/IDP), Kofax Capture/Transformation (KC/KTM), UiPath Document Understanding (DU), Microsoft Power Platform

Product & Delivery: Disciplined Agile/Scrum, SAFe, SDLC, Roadmap Workshops, Vendor Management, Stakeholder Engagement, Cross-Functional Leadership
